Supplementary information for release: 20 July 2010

DETAILS OF PEERMONT'S SUCCESSFUL EXTENSION OF 2014 SENIOR SECURED NOTES HEDGING ARRANGEMENTS

Further to our earlier press release today, Peermont is pleased to provide further details of its successful extension of the hedging arrangements related to its 7.75% Senior Secured Notes due April 2014 ('the notes"). The hedges include the six monthly coupon payments on the notes as well as the €416,1 million principal due at maturity.

A detailed schedule of the hedged cash flows to maturity of the notes is attached. A further schedule setting out the anticipated cash flows relating to the April 2011 Mark-to-Market liability is also provided.

The hedges take the form of Symmetrical Recovery Swaps ("SRS") which are non-extinguishing and, in the event of default, either counterparty receives / pays the actual recovery rate achieved by the note holders.

The related SRSs cash flows have been negotiated to match what management believes is achievable in terms of projected future cash flows whilst minimising refinancing risk at the maturity of the notes.

Enquires should be directed to:
